**General Rate Application 2012-2013 Yukon Conservation Society
Information Requests of Yukon Energy Corporation – Round 2**

1. Please resubmit your response to YCS's first set of Information Requests in the format requested by the YUB (including not only the reference to answers contained in other IR Responses, but also copies of the responses themselves). Thank you.
2. In June of 2010, Yukon Energy Corporation President David Morrison went to market to sell a \$100 million bond with an interest rate of 5%. How was this money used to finance Mayo B, the Carmacks-Stewart Transmission Line, and studies into potential future projects?
3. How will the ability to pay the 5% interest rate on this \$100 million debt be affected by the refinancing of YEC's debt to a lower interest rate of 4.25%?
4. The Yukon News reported that Yukon Energy Corporation planned to set up a "sinking fund" to accrue value until it matures in 30 years. Please describe the status and progress of this fund.
5. Why was the 20 Year Resource Plan included in the GRA late in the process?
6. Why are some YEC representatives saying the Resource Plan submitted to the YUB is a draft, and that public comments would be incorporated once consultations were complete, but other YEC representatives are saying the version submitted to the YUB is the final version? Which is correct?
7. Why are the summary, overview and overall documents of the 20 Year Resource Plan different from each other (and not simply in terms of each is shorter than the latter, but in content – as in, some last minute additions were made to the summary that didn't make it into the overview, and some last minute additions that did make it into the overview did not make it into the long form documents.) Please describe, because there is such a discrepancy in the literature, which version we are to take as the plan, and why they are not congruent?

8. Please explain why the 20 Year Resource Plan includes Waste-To-Energy when YEC has no plan to pursue this option?
9. Please explain why YEC wrote and released its draft (or final?) 20 Year Resource Plan to the public and the YUB before conducting a wind mini-charrette?
10. Please describe in detail the assumptions that were factored into the calculations used to determine the cost per kilowatt hour of each of the short term options and how they are compared with each other.
11. Please describe the assumed costs of natural gas, now and into the future, that were factored in the assumptions of the affordability of LNG as a near term option.
