Calculate the change to Revenue Requirement if Group B costs per Exhibit C1-13 were inflated 5% per year.

Yukon Electrical Response:

Pleas see attached Schedule 1.

Yukon Electrical
Group B Costs - Revised for 5% increase per year
(\$000's)

	<u>2007 Actual</u>	<u>2009 Revised</u>	<u>Change</u>	<u>%</u>	
Operating & Maintenance	7,290	8,037	747	10%	O&M costs are related to a large variety of activities that are undertaken in any year in order to provide safe and reliable service to customers . Each activity is examined in detail and a specific justification provided for the forecasted expenditures. Yukon Electrical is legally entitled to have its revenue requirement established in a manner which provides it with a reasonable opportunity to recover prudently incurred forecast costs. It is entirely inconsistent with this requirement to artificially constrain O&M forecasted costs based on an arbitrary percentage that bears no relationship to the expenditures justified by the evidence.
Depreciation(net of contribution amortization)	3,079	3,395	316	10%	Depreciation expense is a direct product of the increases in Property, Plant and Equipment that are forecast to be incurred in the Test years and it is not appropriate to arbitrarily restrict such an expense to a 5% per year increase that has no relationship to PP&E.
Amortization of deferred costs/credits	187	206	19	10%	Amortization of deferred costs/credits is driven by deferred costs being incurred, such as rate hearing costs, since 2007. As such it is not appropriate to restrict increases to 5% per year.
Return(Debt & Equity returns)	3,614	3,984	370	10%	The amount of return is linked directly to the decisions of the Board regarding return, debt and capital structure. There is no basis to artificially cap the amounts determined based on the above inputs.
Sub-total	<u>14,170</u>	<u>15,622</u>	<u>1,452</u>	<u>10%</u>	

The effect of the above assumptions on Revenue Requirement is \$2,415

Provide the vacancies from 2003 - 2007

Yukon Electrical Response:

As indicated, the term “vacancy rate” has a specific and well understood meaning in the context of regulatory proceedings. As such, Yukon Electrical cannot provide a number for vacancy rates given that Yukon Electrical was not involved in a regulatory proceeding in the years requested. This is due to the fact that vacancy rates relate to the difference between actual FTEs and what was approved in a regulatory proceeding. However, Yukon Electrical does have internal information regarding the difference between managements targeted FTEs in running the business and the actual FTEs in the same period. The associated impacts of changed levels of contractor services to mitigate the vacancies has not been calculated.

It is important to note that these targeted FTE forecasts are prepared for planning purposes and are not prepared in the context of a regulatory filing. Therefore, the degree of rigor is not at the same level as experienced for GRA purposes. As well it is important to note for the reasons stated in CW-YECL-24 that Yukon Electrical has put in place steps that render the historical differences not relevant to the vacancies that Yukon Electrical has forecast in the test period.

**Yukon Electrical
Vacancies**

	Actual 2003	Actual 2004	Actual 2005	Actual 2006	Actual 2007
Targeted FTEs per Management	49.2	49.2	50.2	50.2	52.7
Actual FTEs	43.8	45.9	47.3	46.7	50.0
Difference	5.3	3.3	2.8	3.4	2.7

I would like to know – the forecast that was put in the 1996-97 GRA, which was the last time you were before the Board, for sales on WAF versus actuals and for sales off of WAF versus actuals, as per the table that we have with all the breakdowns that are I that table that you provided?

Response:

Yukon Electrical has been unable to find detailed WAF and non-WAF 1996 and 1997 sales forecast information that builds to the total 1996 and 1997 sales forecast that was provided in YEC-YECL-2(e) Revised Attachment I.

Produce available statistics from our current billing system that would indicate meter reading inaccuracies.

Yukon Electrical Response:

There is one report currently generated, the RP180, which is a 'red flag' type of report which suggests possible meter reading inconsistencies based upon account history. All the reports are checked for irregularities in billing which may be acted upon. However there is no report which would give a clear statistic of meter reading accuracy.
