Hi there,

Please do not use the public's money to fund more reliance on fossil fuels, building the LNG facility. It is too much of our money to spend and will have so many environmental cost, including affecting climate change.

Please, instead invest time, energy and money into renewable resources. Look into harvesting wind as energy. Don't build a whole new facility – that will cost so much and have so many unknowns. Why not simply replace the old diesel generators with new ones.

Please don't build this new LNG facility!

Thank you for taking my feedback into account.
