

YEC Application LNG

Sent: March 31, 2014 1:55 PM**To:** Yukon Utilities Board

To whom it may concern:

I sincerely wish I did not have to write this short statement. I am appalled that in 2014 we are still considering fossil fuel as an alternative for our '*back-up*' energy source in Whitehorse. It's like exchanging a dollar bill for 4 quarters if you ask me - status quo with no improved outcome. Our community is ideal for setting a precedent in innovative renewable energy solutions that could be an inspiration to many jurisdictions.

Another concern of mine is the lack of promotion of information to the general public about sensitizing them to the realities of our present global situation. Why are we not educating and encouraging people to minimize their demand on the system by making them more responsible and independent for their energy consumption?

I know that a significant number of people from our community are of this advice. I am presently off the grid because I thrive for integrity in what I preach. I try as much as possible to be consequent with my actions and not encourage that which I do not believe in. It's very difficult to do but it seems to be the only way as our government and their counterparts, are not listening seemingly because they are working on an agenda of their own...

I totally disapprove of acquiring LNG in the Yukon!
