**Yukon Energy Corporation Whitehorse Diesel to Natural Gas Conversion Project Proceeding**

To Whom It May Concern:

I wish to submit a letter of comment regarding the risks facing this project.

Given the almost universal consensus regarding the catastrophic risks posed by the continued release of greenhouse gasses, notably carbon dioxide from the burning of fossil fuels including LNG, I urge you to include the climate change implications of potentially increasing the greenhouse gas intensity of future electrical generation in the Yukon.

We are simply past the time of turning the page on 'business as usual', including making decisions about our future based on narrow and increasingly out of date criteria. I therefore urge you make a decision which encourages Yukon Electric and the Yukon Government to establish time-bound plans to reach increasing targets for the renewable component of territorial electrical generation. We must stop investing tens of millions of dollars on obsolete technology and start to use these funds to build a brighter future for all Yukoners.

Your decision on this project will either stand as a beacon of hope for a future that is truly sustainable or as yet another nail in the coffin of the futures for our children. Please consider carefully your decision and your own scope for action.

Respectfully submitted by,

A handwritten signature in black ink that reads "C. Stuart Clark". The signature is written in a cursive, flowing style.
