Attention: Mr. Bruce McLennan, Chair

Dear Mr. McLennan:

Re: YEC/YECL 2009 Phase II Application

The YEC/YECL 2009 Phase II Rate Application on February 19, 2010 provided Options A and B to describe the range of retail rate design options considered by the Companies to that date.

In the March Tab 4 filing and in response to information requests Yukon Energy has continued to explore the strengths and weaknesses of various possible rate design options. Building on options reviewed to date, the option proposed by Leading Edge, and continued work by the Companies to arrive at a common position Yukon Energy has develop a new Option C for the Board's consideration. Attached is a description of Option C which is now YEC's preferred rate design option.

Yours truly,

A handwritten signature in black ink, appearing to read "Ed Mollard". The signature is fluid and cursive, with a large initial "E" and "M".

Ed Mollard
Chief Financial Officer
Yukon Energy Corporation

YEC PREFERRED OPTION C - 2009 PHASE II RATE DESIGN

To assist the Board and intervenors in selecting a preferred option within the range identified by Options A and B, and to facilitate review during the hearing next week, Yukon Energy is providing the attached Option C for retail rate design based on YEC's review of the evidence and discussions to date, including review of Leading Edge's (LE's) preferred proposal and continued work by the Companies to arrive at a common position on the outstanding differences as referenced in the Companies' September 30, 2010 filing.

The YEC/YECL 2009 Phase II Rate Application on February 19, 2010 provided Options A and B to describe the range of retail rate design options considered by the Companies to that date, noting that the Companies were not able in the time available to agree on a joint retail rate design proposal. Thereafter, in the March Tab 4 filing and in response to information requests, Yukon Energy explored the strengths and weaknesses of Options A and B, noting YEC's strong preference for Option A over Option B as well as YEC's intent not to limit the Board (or intervenors) to pick one of these two options.

The attached Option C, which based on current information is YEC's preferred option, builds on the options reviewed to date, and includes the following key elements for the initial retail rate adjustments based on approved 2009 revenue requirements:

1. **Runoff rate** – initial runoff rate as proposed by LE at 20 cents per kWh for all zones other than Old Crow (approximates 71.5% of approved short term incremental generation costs, as compared to 80% in Option A and 50% in Option B); longer-term proposal remains to move the runoff rate up to 100% of short term incremental generation costs as soon as is reasonable, consistent with the increasing relevance of diesel fuel on the costs to operate the WAF and MD system (and total relevance of diesel fuel on the costs to operate the isolated systems).
2. **Rate blocks** – begin Residential 3rd block (where runoff rate starts to apply) at 2,500 kW.h/month for this application as per Option B rather than at 1,500 kW.h per Option A. The remaining rate block thresholds remain as set out in the Application (other than this item, the proposed Residential and General Service rate blocks do not vary between Options A and B). As a first priority for future rate adjustments for the Residential class, (as diesel usage increases on Hydro zone), longer-term proposal to move the Residential 3rd block starting point down from 2,500 kWh/month towards 2,000 kWh or lower.
3. **Second block and other retail rates** – as currently proposed in Options A and B except as follows:
 - a. Non-government and government Residential 2nd block rate at \$0.1375/kWh, with 1st block adjusted accordingly to achieve the targeted level of overall class revenue (for non-government, this is 2 c/kWh more than 1st block rate);
 - b. Non government and government General Service 2nd block and demand charge rates at Option B levels, with 1st block adjusted accordingly to achieve the targeted level of overall class revenue.

Table 1 below compares the impact on Residential and General Service non-government bills of the YEC preferred Option C and other options currently in evidence. Attachment A provides the full set of tables for Residential and General Service rates and bills under Option C

Table 1 - Monthly bill increases (+) or decreases (-)

Residential NG	Monthly use (kW.h)				
	700	1200	1500	2000	3000
Option C	-3.2%	-1.4%	0.5%	2.2%	12.5%
