As per our telephone conversation of May 14th, I would like to confirm my intention to make a written rather than an oral submission to the Utility Board with regard to the YECL and YEC application with the Board for rate adjustments. My concern relates to the establishment of three user groups based on how much energy is used. I do not believe that the proposed system is fair to consumers who happen to use forced air electric furnaces or baseboard heaters to heat their homes. Rather than promoting energy conservation and enhancing air quality the proposed system may well do the opposite.
